PROFILE

Aspiring Site Reliability Engineer focused on cloud-native infrastructure, reliability engineering, and DevOps automation. Experienced in containerizing microservices, implementing GitOps pipelines with Kubernetes, and building observability stacks using Prometheus and Grafana. Passionate about designing resilient systems and automating infrastructure for high availability and system reliability.

SKILLS

- **Cloud & Infrastructure:** Kubernetes, Docker, AWS EC2, Linux
- **CI/CD & GitOps:** GitHub Actions, ArgoCD, Jenkins (Basic), GHCR
- **Observability & Reliability:** Prometheus, Grafana, Redis, Resilience4j
- **Security:** Trivy, SSL/TLS, OAuth2, SSH
- **Languages:** Java (Spring Boot), Bash, SQL

WORK EXPERIENCE

MyPetalPot-StartUp | ABESIT

SPRING BOOT BACKEND DEVELOPER INTERN

Duration: Nov 2024- Jan 2025

Java | SpringBoot | Spring Data JPA | MySQL | Lombok

- Developed and optimized **RESTful APIs** for user authentication and cart management, focusing on database schema efficiency in **MySQL**
- Collaborated on server-side logic and **Thymeleaf** integration to ensure seamless data flow between backend and UI.

PROJECTS

1. Resilient API Gateway: GitOps & High-Availability Infrastructure

Java | Spring Boot | Redis | Kubernetes | ArgoCD | Prometheus | Grafana

GitHub: <https://github.com/Vaibhav979/resilient-api-gateway>

- Implemented a GitOps deployment pipeline using **ArgoCD** to automatically synchronize **Kubernetes deployments** with GitHub repositories
- Implemented **Fault Tolerance** patterns using **Resilience4j**, including **Circuit Breakers** and **Retry mechanisms** to isolate microservice failures.
- Designed a **Redis-backed fixed-window rate limiter** to protect backend services from request bursts and improve system stability.
- Built observability stack using **Prometheus and Grafana** to monitor latency, error rates, and traffic patterns across microservices.

2. End-to-End Secure CI/CD & Cloud Deployment

Docker | Docker Compose | PostgreSQL | GitHub Actions | Trivy | GHCR | AWS EC2 | Linux | SSL/TLS

GitHub: <https://github.com/Vaibhav979/containerized-loan-api>

- Built an automated **CI/CD pipeline** using GitHub Actions with **Trivy security scanning** and container image publishing to GHCR.
- Optimized container images using **multi-stage Dockerfiles**, reducing image size and improving deployment speed to **AWS EC2**.
- Enabled automated environment isolation across development, staging, and production using **Docker Compose** and environment variables.

3. Bash-based Cloud Automation

Bash | AWS EC2 | Linux | Docker | SSH | Django

- Developed **Infrastructure-as-Code (IaC)** scripts to automate **AWS EC2 provisioning**, Docker engine setup, and application bootstrapping.
- Reduced environment setup time **from ~20–30 minutes to ~2–3 minutes through automated Bash deployment scripts**.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Engineering

Dr. A.P.J. Abdul Kalam Technical University | 2026 | CGPA: 7.3 / 10

CERTIFICATIONS :

CCNA (Cisco Networking Academy) — Networking Fundamentals, 2025
