PROFILE

Building production-ready backend and infrastructure systems with experience in cloud deployments, CI/CD automation, containerized environments, and reliability engineering.

SKILLS

- **Languages & Scripting:** Java (Spring Boot), Python (Basic), SQL, Bash Scripting
- **Cloud & Infrastructure:** AWS EC2, Linux, Docker, Kubernetes, Nginx
- **Monitoring, Reliability & Caching:** Prometheus, Grafana, Redis, Resilience4j
- **Networking & Systems:** TCP/IP, DNS, HTTP/HTTPS, Subnetting, Security Groups, Load Balancing

WORK EXPERIENCE

MyPetalPot-StartUp | ABESIT

SPRING BOOT BACKEND DEVELOPER INTERN

Duration: Nov 2024 - Dec 2024

Java | SpringBoot | Spring Data JPA | MySQL | Lombok

- Developed and optimized **RESTful APIs** for **authentication** and **cart workflows** using **Spring Boot**
- Designed efficient **MySQL schemas** and improved query performance for real-time data handling
- Collaborated across backend and UI layers to ensure seamless data flow and system reliability

PROJECTS

1. Resilient API Gateway: GitOps & High-Availability Infrastructure

Java | Spring Boot | Redis | Kubernetes | ArgoCD | Prometheus | Grafana

GitHub: <https://github.com/Vaibhav979/resilient-api-gateway>

- Designed a **cloud-native API gateway** handling **service-to-service communication** with **fault tolerance**
- Implemented **Redis-backed rate limiting** and **Resilience4j** patterns (circuit breaker, retries) for system stability
- Built a **multi-layer caching system (Redis → PostgreSQL fallback)** maintaining **sub-500ms response latency** during simulated dependency failures.
- Built **GitOps-based CI/CD pipeline** using **ArgoCD** for automated **Kubernetes** deployments
- Developed **observability** stack using **Prometheus** and **Grafana** for monitoring system metrics and traffic patterns

2. Internal Developer Platform (IDP) — Automated Deployment Engine

Java | Spring Boot | Docker | PostgreSQL

GitHub: <https://github.com/Vaibhav979/idp-platform>

- **Engineered a Control Plane** to automate end-to-end deployments from a GitHub URL to a running container with one-click orchestration.
- **Developed Recursive Path-Aware Logic** to traverse repository directory trees and identify build-entry points (pom.xml/requirements.txt) regardless of depth.
- **Implemented Smart Runtime Detection** for Spring Boot, Node and Python/FastAPI, utilizing dynamic Dockerfile generation to inject specific project contexts into builds.

3. Automated AWS Infrastructure Provisioning & Django Deployment

Java | Spring Boot | Docker | PostgreSQL

GitHub: <https://github.com/Vaibhav979/Linux-Scripts/blob/main/aws-django-deploy.sh>

- Automated end-to-end provisioning of **AWS EC2** infrastructure and deployment of a **Dockerized Django application** using **Bash scripting**.
- Configured **Linux servers**, **security groups**, **Nginx**, **Gunicorn**, and **Docker runtime** for production deployment
- Built deployment workflows inspired by **Terraform** and **Ansible** concepts to reduce manual server configuration overhead.
- Diagnosed and resolved deployment failures involving **container runtime configuration**, **Linux permissions**, **network accessibility**, and **WSGI process mismatches**.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Engineering Dr. A.P.J. Abdul Kalam Technical University |
2026 | CGPA: 7.3 / 10

CERTIFICATIONS :

CCNA (Cisco Networking Academy) — Networking Fundamentals, 2025
